North_America_EV_Market_Analysis

□□ □□**:** 2025-05-30 09:35:46

Analysis of P-rate trends, macroeconomic factors, and scenario projections for the North American EV market. Key findings: 1. P-rate is projected to increase from 16.72% in 2023 to 47.72% by 2030 in the base scenario. 2. Trump's tariff policies could reduce P-rate by 10-25% depending on the scenario. 3. Interest rates (IORB) and core inflation (PCEPILFE) are the most important macroeconomic factors affecting EV sales. 4. LG Energy Solution's market opportunity in North America could be significantly impacted by tariff policies. 5. Cathode material trends show increasing adoption of LFP and Mid-Ni technologies.
